(a) *Height*.—The height of a candidate will be measured by making him stand against the standard with his feet together. The weight should be thrown on the heels and not on the toes or outer side of the feet. He will stand erect without rigidity and with the heels, salves, buttocks and shoulders touching the standard; the chin will be depressed to bring the vertex of the head level under the horizontal bar, and the height will be recorded in centimetres and parts of a centimetre to halves. The minimum height for a candidate is 157.5 cm. except in the case of Gorkhas, Nepalese, Assamese and Garhwalis candidates for whom the minimum height is 152 cm. Candidate who are otherwise fit in all respects but fall short of minimum height by 1.3 cm. or less, will be treated as special cases and relaxation allowed to the extent of 1.3 cm.

(b) *Weight*.—(i) Weight will be taken with candidates fully stripped or with underpants only. In recording weight, fraction of half a kg. will not be noted. A table showing correlation between height, age and average weight is given below for guidance.

Age Period Height (Cm)	20—24			25—29			30—34		
	Weight (Kg.)								
157.5	49.5	51.5	52.5						
160.0	51.0	52.5	54.0						
162.5	52.5	54.0	55.5						
165.0	53.5	56.0	57.0						
167.5	55.5	57.0	58.0						
170.0	57.0	58.5	60.0						
172.5	58.5	60.5	62.0						
175.5	60.5	62.0	64.0						
178.0	62.0	64.0	66.0						
180.0	64.0	66.0	68.5						
183.0	66.0	69.0	71.0						

(ii) It is not possible to lay down precise standards for weight in relation to height and age. The correlation table is, therefore, only a guide and cannot be applied universally. A 10 per cent departure from the average weight given in the table is to be considered as within normal limits. There may nevertheless be some individuals who according to the above standard may be over-weight but from the general build of

the body are fit in every respect. The over-weight in such cases may be due to heavy bones and muscular development and not to obesity. Similarly for those who are under-weight the criteria should be the general build of the body and proportionate development rather than rigid adherence to the standards in the above table.

(c) *Chest*.—The chest should be well developed with a minimum range of expansion of 5 cm. The candidate's chest will be measured by making him stand erect with his feet together and his arms raised over his head. The tape will be so adjusted round the chest that its upper edge touches the inferior angles of the shoulder-blades behind and its lower edge and upper part of the nipples in front. The arms will then be lowered to hang loosely by the side. Care will be taken that the shoulders are not thrown upwards or backwards so as to displace the tape. The candidate will then be directed to take a deep inspiration several times and the maximum and minimum expansion of the chest will be carefully noted. The minimum and maximum will then be recorded in cm. thus 84/89, 86/91 etc.

In recording the measurement, fractions of less than half a centimetre should not be noted.

4. *Dental conditions*.—It should be ensured that sufficient number of sound natural teeth are present for efficient mastication:—

- (a) In order to assess the dental condition of an individual; teeth in apposition with corresponding teeth in the other jaw will be allotted points as follows :
 (i) Central incisor, lateral incisor, canine 1st and 2nd premolar and under developed third molar 1 point each.
 (ii) 1st and 2nd molar and fully developed third molar 2 points each.
 When all 32 teeth are present there will be a total count of 22 points.
- (b) A candidate must have a minimum of 14 dental points to be acceptable;
- (c) The following teeth in good functional apposition must be present in each jaw :
 (i) Any 4 of 6 anteriors.
 (ii) Any 6 of 10 posteriors.
- (d) Candidate suffering from severe pyorrhoea will be rejected. When the state of Pyorrhoea is such that in the opinion of the Dental Officer it can be cured without extraction of teeth, the candidate may be accepted. Candidates may be accepted if they have well fitting artificial dentures in lieu of sound teeth.

5. *Visual standards*.—The minimum acceptable standards of visual acuity are given below :

	Better eye	Worse eye
Distant Vision (corrected)	6/6	6/18
Near Vision (corrected)	J1	J6

Myopia of not more than —5.5D in any one meridian.

Hypermetropia of not more than +3.5D in any one meridian.

- NOTES : (i) Fundus and Media to be healthy and within normal limits.
 (ii) No undue degenerative signs of vitreous or chorioretina to be present suggesting progressive myopia.
 (iii) Should have good binocular vision, fusion faculty and full field vision in both eyes.
 (iv) There should be no organic disease likely to cause exacerbations or deterioration.

Field of vision.—Normal in each eye as tested by confrontation test.

Colour vision.—Inability to distinguish primary colours will not be regarded as a cause for rejection but the fact will be noted in the proceedings and the candidate informed.

In all cases, where glasses are worn and where a candidate is examined by an Ophthalmologist, power of lenses must be noted.

6. *Hearing Standard.*—Should with the back to the examiner be able to hear a forced whisper at a distance of 609.5 cm. with each ear separately.

7. The above physical standards will also apply to female candidate except for the following :—

- (a) The height and weight need not conform to the existing height and weight table for men. Minimum height and weight should be 142.0 cm. and 36.0 kg. respectively.
- (b) The girth and the general development of the chest also need not conform to what is laid down in the existing physical standards for men. The candidate should, however, be capable of a chest expansion of 5 cm.
